linked-in: @/connectspawan
portfolio: <https://connectspawan.netlify.app/>

Objective

Motivated Computer Engineering student with hands-on experience in full-stack web and mobile application development using Django, Flutter, REST APIs, and PostgreSQL. Experienced in building scalable backend systems, interactive user interfaces, and AI-powered applications through professional internship and independent projects. Seeking opportunities to contribute technical expertise, problem-solving skills, and innovative thinking in software engineering and application development roles.

Education

Course / Degree	School / University	CGPA	Year
B.Tech in Computer Engineering	Swarnnim Startup & Innovation University	9	2026
Higher Secondary School	Hetauda School of Management	5.8	2021
Secondary School	Shree Adhunik Rastriya Higher Secondary School	7.1	2019

Experience

Shreeji FinTech Pvt. Ltd. | Software Development Intern | November’25 – April’26

Technologies: Django, Python, Flutter, REST API, PostgreSQL, HTML, CSS, JavaScript, SQLite

Responsibilities & Contributions:

- Developed and deployed multiple full-stack web applications, including the official corporate website and the GyanSetu learning platform.
- Built and integrated professional mobile applications using Flutter with Django backend via REST APIs.
- Designed and implemented scalable REST APIs for secure and efficient communication between backend and mobile applications.
- Worked with both SQLite and PostgreSQL, implementing optimized database structures for performance and scalability.
- Currently developing “Toon Quiz”, a cartoon-themed quiz application (KBC-style) with user authentication, dynamic question management, lifelines, and user progress tracking, built on a scalable Django backend with REST API integration.
- Handled complete full-stack development including system design, backend architecture, API integration, UI development, debugging, testing, and deployment.
- Mentored and guided newly joined interns in understanding project architecture and API integration.
- Contributed to enhancing the company’s digital presence and improving application performance.

Role: Sole Developer Intern — led end-to-end system development, taking ownership of architecture, implementation, and team guidance in a startup environment.

Projects

- Elite Digitals – Premium Digital Agency Website | April’26 – May’26**

Technologies: Django, Python, HTML, CSS, JavaScript

Description: Developed a premium digital agency website for “Elite Digitals” showcasing services including app development, website development, UGC content creation, graphic design, and premium presentation design. Built using Django backend with responsive frontend technologies including HTML, CSS, and JavaScript. Designed the platform with a modern premium-style UI/UX to deliver a visually engaging and professional user experience. Implemented interactive layouts, structured service presentation, contact integration, and scalable content management to strengthen digital branding and client engagement.

Role: Sole Developer — responsible for full-stack development, premium UI/UX implementation, backend integration, deployment, and website optimization.

Link: <https://elite-digitals.onrender.com/>

- **Toon Quiz App (KBC Style for Kids) | April’26 – April’26**

Technologies: Flutter, Django, REST API, PostgreSQL

Description: Developed an interactive cartoon-themed quiz application inspired by KBC for children. Implemented features including user authentication, dynamic question management, lifelines, score tracking, and progress management. Built scalable Django REST APIs with PostgreSQL database integration and designed engaging UI/UX focused on educational gameplay experience.

Role: Sole Developer — responsible for UI design, backend integration, game logic implementation, and performance optimization.

- **GyanSetu – Learning Platform (Web & Mobile App) | February’26 – March’26**

Technologies: Flutter, Django, REST API, PostgreSQL

Description: Developed a full-stack learning platform consisting of a web application and mobile app for structured educational content delivery. Built Django backend APIs integrated with Flutter frontend for seamless user experience and real-time data synchronization. Implemented scalable PostgreSQL database architecture and responsive UI design for efficient content management and accessibility.

Role: Sole Developer — responsible for end-to-end development including backend architecture, REST API integration, Flutter app development, responsive web implementation, PostgreSQL database management, deployment, and system optimization.

Link: <https://www.gyansetu.shreejifintech.com/>

- **Wish2Chat – Festival Content Sharing App | January’26 – February’26**

Technologies: Django, Python, Flutter, REST API, SQLite

Description: Built a festival-based content sharing application that provides Images, GIFs, Stickers, Quotes, and personalized “Write Na” content for various occasions and festivals. Developed backend services using Django and managed content storage with SQLite database. Implemented REST APIs to fetch dynamic content into the mobile application. Designed the system to allow users to easily browse, personalize, and share content directly on social media platform, this project demonstrates integration of backend services with mobile UI for scalable content delivery.

Role: Sole Developer — responsible for backend architecture, database management, API creation, mobile integration, content structuring and deployment.

- **Government Job Portal (Website & Mobile App) | December’25**

Technologies: Django, Python, Flutter, REST API, SQLite

Description: Developed a full-stack Government Job Portal consisting of a web platform and a mobile application. The system enables users to search jobs based on state, qualification, and eligibility criteria. Built the web platform using Django and developed the mobile application using Flutter. Designed and implemented

REST APIs to securely connect Django backend with the Flutter application, enabling real-time job data synchronization. The platform provides structured job listings, filtering features, and a user-friendly interface for seamless navigation.

Role: Sole Developer — handled backend API development, mobile app integration, database design, UI implementation, and complete system deployment.

Link: <https://www.jobportal.shreejifintech.com/>

- **Shreeji FinTech – Corporate Website | November’25 – December’25**

Technologies: Django, Python, HTML, CSS, JavaScript

Description: Designed and developed the official corporate website for Shreeji FinTech to establish the company’s professional digital presence. Built using Django for backend development and integrated responsive front-end design using HTML, CSS, and JavaScript. Implemented dynamic content management, secure form handling, and optimized performance for smooth user experience. The website enhances brand credibility and improves client engagement through structured service presentation and intuitive navigation.

Role: Sole Developer — responsible for full-stack development including backend architecture, database integration, UI design, deployment, and maintenance.

Link: <https://www.shreejifintech.com/>

- **Gesture-Controlled Rocket Game | September’25**

Technologies: Python, Streamlit, MediaPipe, OpenCV, Pygame

Description: Built an interactive space-shooter game controlled entirely by hand gestures using a webcam. Integrated MediaPipe Hands and OpenCV for real-time gesture recognition (rocket movement via vertical hand position, shooting via “gun” gesture), and Pygame for rendering gameplay with sound effects, power-ups, and difficulty scaling. Streamlit was used to provide a user-friendly interface for launching and managing the game. The project showcases the fusion of computer vision and gaming to create immersive, touchless interaction.

Role: Developer — implemented gesture recognition logic, optimized gameplay mechanics, and integrated multimodal components into a seamless end-to-end system.

- **Portfolio | May’25**

Technologies: HTML, CSS, JavaScript

Description: Designed and built a personal portfolio to showcase a range of projects in AI/ML, computer vision, and web development. This site acts as a central hub for my technical work, highlighting skills in front-end design and professional presentation.

My Role: Sole Developer and Designer.

Link : <https://connectspawan.netlify.app/>

- **Photo Enhancer: AI-powered Photo Enhancement | April’25 – April’25**

Technologies: Python, Streamlit, OpenCV, GFPGAN, RealESRGAN

Project Definition: Built an intelligent image restoration system that automatically enhances blurry, low-resolution, or damaged photographs. Leveraged OpenCV for core image processing, **GFPGAN** for facial reconstruction, and **RealESRGAN** for 4x super-resolution upscaling, deployed via a Streamlit web interface. The tool effectively restores archival photos, improves forensic evidence quality, and assists digital artists by recovering lost details while preserving natural textures.

My Role: As a sole Developer and Researcher, I undertook full stack responsibility for the project, including system architecture design, algorithm development, implementation, testing, optimization and deployment.

• **EmpowerAbility: Mapping the Missing Limbs | March’25**

Technologies: Python, Streamlit, Mediapipe Holistic, YOLOv8, OpenCV

Project Definition: Developed a real-time AI monitoring system in Python to enhance accessibility by detecting disabled individuals in public spaces. The system leverages **OpenCV** for live video processing and frame analysis, Streamlit for an interactive web dashboard, MediaPipe Holistic for human pose estimation to identify mobility patterns, and **YOLOv8** for object detection of assistive devices like wheelchairs and crutches. This solution provides actionable insights for smart cities and healthcare facilities by identifying accessibility challenges in real-time, enabling timely assistance and infrastructure improvements.

My Role: Served as project leader, overseeing end-to-end development while actively contributing to core coding task.

• **Crook Catcher: AI-Powered Face Identification | March’25 – March’25**

Technologies: Python, OpenCV, Face Recognition, MobileNet SSD, NumPy

Project Definition: Developed a real-time person identification system that classifies known and unknown individuals using face recognition. Implemented ROI selection for targeted monitoring, **MobileNet SSD** for human detection, and face encoding/recognition to match against a database. The system automatically captures and organizes images of detected persons with timestamps, providing valuable data for security applications.

My Role: As a sole Developer and Researcher, I undertook full stack responsibility for the project, including system architecture design, algorithm development, implementation, testing, optimization and deployment.

Technical Skills	Non – Technical Skills
- Flutter - Django - Python - JavaScript - HTML, CSS - Git & Github - PostgreSQL & SQLite - Canva	- Communication Skills - Time Management - Integrity

Achievements

- Won 1st Prize at University Engineer’s Day 2025 for “Gesture-Controlled Rocket Game” (Best Model Award).
- Finalist, *Code Unnati Innovation Marathon 3.0* (2025) – AI-based solution for social impact.
- Grant Recipient (₹2 Lakhs), Gujarat Student Startup & Innovation Policy (SSIP) for *EmpowerAbility* (2025)

Certifications

- Innovation Ambassador (IA) Training 'Foundation Level' | Ministry of Education & AICTE | September’25
- SAP Certification in Python for Machine Learning & Deep Learning | July’24 - March’25

Industrial Exposer

Adani Group Industrial Visits | March’25

(Adani Port & SEZ | Adani Wilmar Ltd | Solar Plant | Windtech)

- Studied port automation systems, edible oil production IoT, and renewable energy infrastructure
- Analyzed solar/wind power generation workflows and sustainability practices
- Documented industrial safety protocols and large-scale supply chain management.

Indian Space Research Organisation (ISRO), Ahmedabad | May'23

- Observed satellite assembly, testing facilities, and space technology R&D at SAC (Space Applications Centre)
- Gained insights into remote sensing, launch vehicle systems, and mission control operations
- Interacted with scientists about software systems for spacecraft navigation and data processing

Co-curricular Activities

- Winner of Model Presentation on Engineer's Day at the University | September'25
- 1st Prize, Intercollege Football Tournament | January'25
- Passionate multi-instrumentalist (guitar, piano, drums) fostering creativity, discipline, and collaboration through music.

Personal Details

- Nationality: Nepali
- Date Of Birth: October 12, 2001
- Languages Known: English, Hindi, Nepali, and Bhojpuri
- Interests: Photography and Travelling
- Address: Hetauda, Nepal
