Objective

A motivated and dedicated student seeking an opportunity to apply academic knowledge in real-world environments. Eager to take on challenges, collaborate with teams, and continuously enhance technical and professional skills while contributing meaningfully to organizational goals through a strong work ethic and commitment to learning.

Education

Course / Degree	School / University	CGPA	Year
B.Tech in Computer Engineering	Swarnim Startup & Innovation University	8.70	Currently Pursing
Diploma in Computer Engineering	Swarnim Startup & Innovation University	8.95	2022
Secondary School	Lalita Green Lawns School	7.42	2016

Projects

- **Project Name:** Smart Weather Dashboard [December'25]

Technologies: (Python, Streamlit, OpenWeatherMap API, Git, GitHub, Pandas, Matplotlib, Requests)

My Role: Designed, developed, and deployed the application; handled API integration, version control using GitHub, and optimized the user interface for smooth user experience.

Project Definition: Developed a real-time weather dashboard displaying current conditions and 5-day forecasts for any city using the OpenWeatherMap API. Deployed the application on Streamlit Cloud with Git & GitHub for version control. Implemented interactive visualizations, dynamic weather icons, unit conversion (°C/°F), location-based detection, and error handling, demonstrating practical API integration and data visualization skills.

- **Project Name: EmoSonic: Mood Music Recommender [September'25]**

Technologies: (Python, Streamlit, OpenCV, FER, NumPy, Pandas, Matplotlib/Seaborn, Spotify API)

My Role: Played a key role in testing, debugging, and optimizing the gesture-controlled game for better usability.

Project Definition: Developed an intelligent music recommender that suggests playlists based on the user's current mood. Utilized computer vision to detect facial emotions via webcam using FER and OpenCV, mapped detected emotions to Spotify playlists through API integration, and created a user-friendly interface using Streamlit. The project demonstrates the application of AI in personalized entertainment.

- **Project Name: EmpowerAbility: Mapping the Missing Limbs [March'25]**

Technologies: (Python, Streamlit, Mediapipe Holistic, YOLOv8, OpenCV)

My Role: Research and Development

Project Definition: Built a computer vision system using Python that detects disabled individuals in real-time through CCTV feeds. The architecture combines YOLOv8 for assistive device detection (wheelchairs/crutches), MediaPipe Holistic for mobility impairment analysis, and OpenCV for video processing. Results are displayed via a Streamlit dashboard, providing actionable data to improve accessibility in public spaces and healthcare facilities.

Experience

Co-Founder & Graphic Designer

Elite Digital [February'26 – Present]

- Co-founded a digital services agency specializing in graphic design, social media management, and web development.
- Led the design of creative assets (logos, social media creatives, marketing materials) for diverse clients.
- Delivered projects within deadlines while maintaining high-quality design standards.
- Utilized tools like Canva, Photoshop, and AI tools to create visually appealing content.

Python Developer Intern

Elevate Labs [November'25 – December'25]

- Successfully completed a Python Developer Internship with hands-on project work.
- Developed and optimized Python scripts for real-world use cases.
- Demonstrated strong analytical thinking and problem-solving skills.
- Awarded Best Performer for exceptional performance and dedication.

Certifications

- Elevate Labs – Python Developer Internship (Best Performer) [November'25 – December'25]

- MHRD Innovation Cell – Institution’s Innovation Ambassador (IA) Online Training [September’25]
- Google Crash Course in Python [June’25 – July’25]
- IBM Company Certification in Python for Data Science & AI [July’24 – August’24]

Technical Skills

Non – Technical Skills

- Python
- MySQL
- JavaScript
- HTML, CSS
- Canva
- Photoshop

- Communication Skills
- Quick Learner
- Positive Attitude

Achievement

- Secured 1st place in the Model Presentation at University Engineer’s Day celebrations for “Gesture – Controlled Rocket Game” [September’2025].
- Received a (₹2 Lakh) grant under the Gujarat Student Startup & Innovation Policy (SSIP) for the project “EmpowerAbility” [April’2025].

Industrial Exposer

Adani Group Industrial Visits [March’25]

(Adani Port & SEZ | Adani Wilmar Ltd | Solar Plant | Windtech)

- Studied port automation systems, edible oil production IoT, and renewable energy infrastructure
- Analyzed solar/wind power generation workflows and sustainability practices
- Documented industrial safety protocols and large-scale supply chain management.

Indian Space Research Organisation (ISRO), Ahmedabad [November’19]

- Observed satellite assembly, testing facilities, and space technology R&D at SAC (Space Applications Centre)
- Gained insights into remote sensing, launch vehicle systems, and mission control operations
- Interacted with scientists about software systems for spacecraft navigation and data processing

Co – curricular Activities

- **Engineer’s Day Event at Swarnim Startup & Innovation Unniversity – Participant [September’25]**
Participated in Engineer’s Day 2025 with a model presentation, showcasing innovation and technical skills.

- **Enterprenaari 3.0 at Swarnim Start-Up & Innovation University – Participant [March’25]**
Pitched our project “EmpowerAbility”, demonstrating its concept, innovation, and technical implementation.
- **School Annual Musical Event – Participant [November’15]**
Participated in the school's musical event, contributing to the performance and showcasing musical skills.
- **Annual School Function – Group Dance Participant [December’14]**
Participated in the group dance performance, contributing to the choreography and team coordination.

Personal Details

- **Nationality:** Indian
- **Date Of Birth:** September 16, 2000
- **Languages Known:** English, Hindi, Gujarati, Bengoli
- **Address:** Ghodasar, Ahmedabad, Gujrat, India, 380050
